

NAINSY SHARMA

Software Engineer & Data Enthusiast

Raipur, Chhattisgarh, India | nainsysharma24@gmail.com | [linkedin.com/in/nainsy-sharma-375108291](https://www.linkedin.com/in/nainsy-sharma-375108291) | github.com/nainsy24

PROFILE SUMMARY

Final-year B.Tech student who genuinely enjoys playing with data and figuring out how things work under the hood. I don't stop at a notebook — I've built and shipped three full projects, each backed by a working API and a live, deployed app. I pick up new tools quickly when a project calls for it, enjoy the process of debugging something until it actually works, and treat feedback as fuel to get better rather than something to avoid. Still early in my journey and looking forward to learning a lot more.

SKILLS

- **Programming:** Python, SQL (PostgreSQL) — comfortable picking up new languages and frameworks quickly
- **Backend & APIs:** REST API design (FastAPI), database-backed applications, Git/GitHub, version-controlled workflows
- **Machine Learning:** Regression, classification, clustering, feature engineering, model evaluation (ROC-AUC, F1)
- **Deployment:** Streamlit apps, end-to-end pipelines from raw data to a live, working product
- **Computer Vision (learning):** OpenCV, Haar Cascade, currently exploring CNNs
- **Strengths:** Strong problem-solving instincts, self-starter, comfortable debugging end-to-end systems, quick learner

PROJECTS

RiskLens — Credit Risk Analysis & Loan Default Prediction ([GitHub](#)) | ([Live Demo](#))

- Cleaned and engineered features on 100k loan records; audited for data leakage before trusting model results.
- Compared Logistic Regression, Random Forest, and XGBoost; selected ROC-AUC (0.74) as the right metric for imbalanced data.
- Designed a FastAPI backend and Streamlit frontend to serve live predictions — a full working app, not just a notebook.

Blostem — Customer Churn Prediction & Business Intelligence ([GitHub](#)) | ([Live Demo](#))

- Built a full end-to-end ML pipeline on a telecom dataset, engineering 40 features to predict churn.
- Logistic Regression achieved ROC-AUC 0.763, F1 0.717 — outperforming more complex models once features were engineered well.
- Applied RFM analysis + K-Means clustering and delivered a business-facing insights dashboard.

Face Mask Detector — Real-Time Detection with OpenCV ([GitHub](#))

- Built a real-time webcam app using OpenCV Haar Cascade classifiers to detect faces and flag mask / no-mask.
- Learned the limitations of heuristic-based detection firsthand — sensitive to lighting — and am now exploring CNNs to improve on it.

EDUCATION

VIT Bhopal University — B.Tech (Final Year, Expected 2027) | CGPA: 8.42

CERTIFICATIONS

- Machine Learning in Python — Coursera (University of Michigan)
- Introduction to Internet of Things (IoT) — NPTEL
- Cloud Computing — NPTEL

LEADERSHIP & EXTRACURRICULARS

- Member, Discipline Committee, College Student Council
- Managed logistics for college fest & Garba nights
- State-level sprinter (100m & 200m); active basketball player
